Stuart A. Klugman, Harry H. Panjer, Gordon E. Willmot

**Loss Models: From Data to Decisions (Wiley Series in Probability and Statistics)** Stuart A. Klugman, Harry H. Panjer, Gordon E. Willmot

Praise for the *Third Edition*

**"This book provides in-depth coverage of modelling techniques used throughout many branches of actuarial science. . . . The exceptional high standard of this book has made it a pleasure to read."**  
—*Annals of Actuarial Science*

Newly organized to focus exclusively on material tested in the Society of Actuaries' Exam C and the Casualty Actuarial Society's Exam 4, *Loss Models: From Data to Decisions, Fourth Edition* continues to supply actuaries with a practical approach to the key concepts and techniques needed on the job. With updated material and extensive examples, the book successfully provides the essential methods for using available data to construct models for the frequency and severity of future adverse outcomes.

The book continues to equip readers with the tools needed for the construction and analysis of mathematical models that describe the process by which funds flow into and out of an insurance system. Focusing on the loss process, the authors explore key quantitative techniques including random variables, basic distributional quantities, and the recursive method, and discuss techniques for classifying and creating distributions. Parametric, non-parametric, and Bayesian estimation methods are thoroughly covered along with advice for choosing an appropriate model.

New features of this *Fourth Edition* include:

- Expanded discussion of working with large data sets, now including more practical elements of constructing decrement tables
- Added coverage of methods for simulating several special situations
- An updated presentation of Bayesian estimation, outlining conjugate prior distributions and the linear exponential family as well as related computational issues

Throughout the book, numerous examples showcase the real-world applications of the presented concepts, with an emphasis on calculations and spreadsheet implementation. A wealth of new exercises taken from previous Exam C/4 exams allows readers to test their comprehension of the material, and a related FTP site features the book's data sets.

*Loss Models, Fourth Edition* is an indispensable resource for students and aspiring actuaries who are preparing to take the SOA and CAS examinations. The book is also a valuable reference for professional actuaries, actuarial students, and anyone who works with loss and risk models.

**From reader reviews:**

**Martin Solomon:**

The knowledge that you get from Loss Models: From Data to Decisions (Wiley Series in Probability and Statistics) is a more deep you looking the information that hide into the words the more you get serious about reading it. It doesn't mean that this book is hard to understand but Loss Models: From Data to Decisions (Wiley Series in Probability and Statistics) giving you thrill feeling of reading. The writer conveys their point in certain way that can be understood by simply anyone who read that because the author of this book is well-known enough. This particular book also makes your own vocabulary increase well. Therefore it is easy to understand then can go to you, both in printed or e-book style are available. We recommend you for having this specific Loss Models: From Data to Decisions (Wiley Series in Probability and Statistics) instantly.

**Chris Holmes:**

This book untitled Loss Models: From Data to Decisions (Wiley Series in Probability and Statistics) to be one of several books in which best seller in this year, here is because when you read this e-book you can get a lot of benefit on it. You will easily to buy this specific book in the book shop or you can order it via online. The publisher on this book sells the e-book too. It makes you more readily to read this book, as you can read this book in your Touch screen phone. So there is no reason for you to past this e-book from your list.

**Oliver Gerling:**

Reading can called mind hangout, why? Because if you find yourself reading a book specially book entitled Loss Models: From Data to Decisions (Wiley Series in Probability and Statistics) your head will drift away trough every dimension, wandering in each aspect that maybe unknown for but surely will end up your mind friends. Imaging each and every word written in a publication then become one contact form conclusion and explanation that will maybe you never get prior to. The Loss Models: From Data to Decisions (Wiley Series in Probability and Statistics) giving you a different experience more than blown away your thoughts but also giving you useful info for your better life within this era. So now let us teach you the relaxing pattern the following is your body and mind are going to be pleased when you are finished reading it, like winning a. Do you want to try this extraordinary investing spare time activity?

**Carey Gilliam:**

As a college student exactly feel bored to be able to reading. If their teacher asked them to go to the library or make summary for some book, they are complained. Just tiny students that has reading's heart and soul or real their passion. They just do what the trainer want, like asked to go to the library. They go to generally there but nothing reading very seriously. Any students feel that studying is not important, boring in addition to can't see colorful images on there. Yeah, it is being complicated. Book is very important to suit your needs. As we know that on this age, many ways to get whatever we wish. Likewise word says, ways to reach

Chinese's country. Therefore , this Loss Models: From Data to Decisions (Wiley Series in Probability and Statistics) can make you sense more interested to read.
