The essential textbook for electrical engineering students and professionals-now in a valuable new edition

The increasing use of high-speed digital technology requires that all electrical engineers have a working knowledge of transmission lines. However, because of the introduction of computer engineering courses into already-crowded four-year undergraduate programs, the transmission line courses in many electrical engineering programs have been relegated to a senior technical elective, if offered at all.

Now, *Analysis of Multiconductor Transmission Lines, Second Edition* has been significantly updated and reorganized to fill the need for a structured course on transmission lines in a senior undergraduate- or graduate-level electrical engineering program. In this new edition, each broad analysis topic, e.g., per-unit-length parameters, frequency-domain analysis, time-domain analysis, and incident field excitation, now has a chapter concerning two-conductor lines followed immediately by a chapter on MTLs for that topic. This enables instructors to emphasize two-conductor lines or MTLs or both.

In addition to the reorganization of the material, this Second Edition now contains important advancements in analysis methods that have developed since the previous edition, such as methods for achieving signal integrity (SI) in high-speed digital interconnects, the finite-difference, time-domain (FDTD) solution methods, and the time-domain to frequency-domain transformation (TDFD) method. Furthermore, the content of Chapters 8 and 9 on digital signal propagation and signal integrity application has been considerably expanded upon to reflect all of the vital information current and future designers of high-speed digital systems need to know.

Complete with an accompanying FTP site, appendices with descriptions of numerous FORTRAN computer codes that implement all the techniques in the text, and a brief but thorough tutorial on the SPICE/PSPICE circuit analysis program, *Analysis of Multiconductor Transmission Lines, Second Edition* is an indispensable textbook for students and a valuable resource for industry professionals.

From reader reviews:

Tod Espitia:

As people who live in the actual modest era should be change about what going on or data even knowledge to make these keep up with the era which is always change and move ahead. Some of you maybe may update themselves by reading books. It is a good choice for you but the problems coming to an individual is you don't know which one you should start with. This Analysis of Multiconductor Transmission Lines is our recommendation to cause you to keep up with the world. Why, as this book serves what you want and want in this era.

Joanna Weekley:

Now a day individuals who Living in the era just where everything reachable by match the internet and the resources within it can be true or not need people to be aware of each info they get. How a lot more to be smart in acquiring any information nowadays? Of course the solution is reading a book. Studying a book can help individuals out of this uncertainty Information especially this Analysis of Multiconductor Transmission Lines book as this book offers you rich details and knowledge. Of course the knowledge in this book hundred % guarantees there is no doubt in it everbody knows.

Lee Erbe:

People live in this new day time of lifestyle always aim to and must have the free time or they will get lots of stress from both daily life and work. So , whenever we ask do people have free time, we will say absolutely sure. People is human not really a robot. Then we consult again, what kind of activity are you experiencing when the spare time coming to a person of course your answer will certainly unlimited right. Then do you ever try this one, reading guides. It can be your alternative throughout spending your spare time, often the book you have read is actually Analysis of Multiconductor Transmission Lines.

Gay Swiderski:

In this period of time globalization it is important to someone to receive information. The information will make anyone to understand the condition of the world. The condition of the world makes the information easier to share. You can find a lot of personal references to get information example: internet, paper, book, and soon. You will observe that now, a lot of publisher which print many kinds of book. The actual book that recommended to your account is Analysis of Multiconductor Transmission Lines this reserve consist a lot of the information with the condition of this world now. This particular book was represented how does the world has grown up. The terminology styles that writer use for explain it is easy to understand. Typically the writer made some analysis when he makes this book. This is why this book suited all of you.
