Linear Causal Modeling with Structural Equations Stanley A. Mulaik

Emphasizing causation as a functional relationship between variables that describe objects, **Linear Causal Modeling with Structural Equations** integrates a general philosophical theory of causation with structural equation modeling (SEM) that concerns the special case of linear causal relations. In addition to describing how the functional relation concept may be generalized to treat probabilistic causation, the book reviews historical treatments of causation and explores recent developments in experimental psychology on studies of the perception of causation. It looks at how to perceive causal relations directly by perceiving quantities in magnitudes and motions of causes that are conserved in the effects of causal exchanges.

The author surveys the basic concepts of graph theory useful in the formulation of structural models. Focusing on SEM, he shows how to write a set of structural equations corresponding to the path diagram, describes two ways of computing variances and covariances of variables in a structural equation model, and introduces matrix equations for the general structural equation model. The text then discusses the problem of identifying a model, parameter estimation, issues involved in designing structural equation models, the application of confirmatory factor analysis, equivalent models, the use of instrumental variables to resolve issues of causal direction and mediated causation, longitudinal modeling, and nonrecursive models with loops. It also evaluates models on several dimensions and examines the polychoric and polyserial correlation coefficients and their derivation.

Covering the fundamentals of algebra and the history of causality, this book provides a solid understanding of causation, linear causal modeling, and SEM. It takes readers through the process of identifying, estimating, analyzing, and evaluating a range of models.

From reader reviews:

Eugene Barnum:

This book entitled Linear Causal Modeling with Structural Equations to be one of several books which best seller in this year, this is because when you read this book you can get a lot of benefit upon it. You will easily to buy that book in the book retailer or you can order it by means of online. The publisher with this book sells the e-book too. It makes you more easily to read this book, because you can read this book in your Mobile phone. So there is no reason to you to past this guide from your list.

Ana Jimenez:

Often the book Linear Causal Modeling with Structural Equations has a lot of information on it. So when you make sure to read this book you can get a lot of advantage. The book was compiled by the very famous author. The writer makes some research ahead of write this book. This particular book very easy to read you can get the point easily after perusing this book.

Walter Pyle:

Beside this Linear Causal Modeling with Structural Equations in your phone, it could possibly give you a way to get nearer to the new knowledge or information. The information and the knowledge you can got here is fresh through the oven so don't be worry if you feel like an old people live in narrow commune. It is good thing to have Linear Causal Modeling with Structural Equations because this book offers for you readable information. Do you at times have book but you seldom get what it's interesting features of. Oh come on, that wil happen if you have this inside your hand. The Enjoyable set up here cannot be questionable, such as treasuring beautiful island. Techniques you still want to miss it? Find this book as well as read it from at this point!

Kimberly Plummer:

What is your hobby? Have you heard in which question when you got scholars? We believe that that problem was given by teacher on their students. Many kinds of hobby, Everyone has different hobby. Therefore you know that little person including reading or as looking at become their hobby. You should know that reading is very important in addition to book as to be the point. Book is important thing to provide you knowledge, except your own personal teacher or lecturer. You discover good news or update about something by book. Numerous books that can you go onto be your object. One of them is this Linear Causal Modeling with Structural Equations.
